January 4, 2016

From: Tim Hesterberg  Google, Seattle

We're hiring interns, and full-time.
We look for good all-around statisticians, including good problem-solving and data analysis
skills, consulting ability, teamwork with software engineers and other
statisticians, and programming ability.

For summer internship positions:
Quantitative Analyst Intern, Summer 2016
Students can apply between January 8th and January 25th. These positions will be filled on a rolling basis; we encourage
students to apply as early as possible.

For full-time positions:
Students can go to http://www.google.com/jobs and search for "statistician", statistics", "quantitative
analyst", "decision support", (they're basically the same), "quantitative user experience researcher", "data
scientist", "data analyst", and "analyst".
Current postings include:
Statistician / Quantitative Analyst, Engineering
User Experience Researcher
Statistical Forecasting Analyst, Google Express
Quantitative Business Analyst, Special Projects

I'm happy to talk with anyone interested (I highly recommend working here).

Thanks.

Tim Hesterberg <rocket@google.com>
