

1/31/14 Syllabus for 960 680 01. The text for the course is A Second Course in Probability, Ross/Peköz, plus an extensive list of notes that can be found on the course Sakai site.

I will cover Chapters 1 and 3, with considerable amplification of the topics in these chapters. In fact, these chapters themselves are a syllabus of topics, in that the treatment, for the most part, is very cursory.

The students in the course have some knowledge of real analysis that includes the rudiments of measure theory.
